# The Benefits of Nitro-Draught™

## The Nitro-Draught™ Systems

The Nitro-Draught™ System has helped to improve the profitability of draught systems by up to 50% and saved dozens of bottles of wine per month at our customers that serve draught beer and have a wine by the glass program. We do this by completing a detailed site survey of the location to determine your specific needs. During the survey, we look at every aspect that affects the profitability of the draught and wine systems.

### Wine by the glass profitability

Both red and white wines are subject to oxidation. Proper storage will minimize the chance of oxidation prior to opening, but once opened; a bottle of wine instantly begins to oxidize. Decanting creates a quick aeration, but over time; this oxidation will quickly change the wine and create an acidic flavor. This oxidation is part of creating wine based vinegars, but unacceptable for retail consumers.

### Nitro-Draught™ 1000

Designed for small pubs and restaurants

- Up to 100 kegs per month
- Produce N2 for wine preservation
